Art Unit:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a drip prevention system for fuel injection, classified in class 123, subclass 467.
- II. Claim 19, drawn to a pilot and main injection timing control, classified in class 123, subclass 300.

The inventions are distinct, each from the other because:

Inventions a drip prevention system for fuel injection and a pilot and main injection timing control are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions with the multiple injection timing control having nothing to do with pump cut-out control safety feature of the other claims.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carl S. Miller whose telephone number is (703) 308-2653.
